

Radiation Tests: Diodes (1)

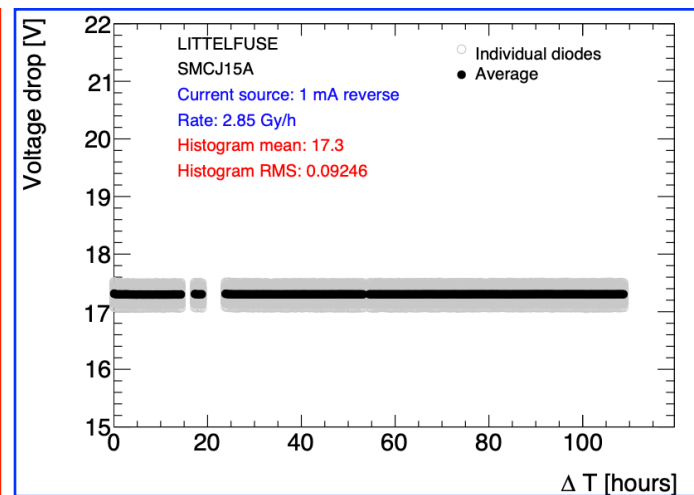

- Seven different diodes were tested
 - MURS160T3G, STPS1L30MF, STPS1L60MF, STPS5045, BAT46, VS-8ETH06, and SMCJ15A (TVS Diode)
- For the TVS diode (SMCJ15A), the TID tests were performed by biasing them at stand-off voltage during the beam time
 - During the stop time, a relay board was used to go through the diode array and conduct a reverse current and measure the breakdown voltage for each diode
- Performed at a flux of 2.85 Gy/h, **TID tests were successful**
