

Radiation Tests: IR2110 MOSFET Driver

- SEE tests performed at a flux of 3.5×10^8 p/cm²/s
 - Output pulses for 8 chips, set on 300 kHz, were monitored
 - There was no significant changes to the pulse shapes during the tests
 - Two chips were monitored for SEEs and no events were observed up to 3.4×10^{11} p/cm², **passing the SEE tests**
- Performed at 3 Gy/h up followed by annealing, **TID tests showed no significant change in parameters**
- **The chips tested for NIEL showed no issues**

Designed board for testing IR2110

Output pulses of IR2110
